

Tensile structures are not just a design choice ... they are a climate solution

a post from **Architects & Structural Engineering Network**

And this is where.

- ✓ Natural ventilation-friendly
- ✓ Lightweight & fast to install
- ✓ Heat-reducing shade systems
- ✓ Perfect for courtyards, walkways, stadiums, and public spaces
- ✓ Visually iconic, yet functionally practical

Imagine:

Courtyards protected with breathable tensile membranes

Walkways shaded without blocking airflow

Public spaces designed for people, not just aesthetics

Buildings that respond to the Indian sun, not fight it

That is real design intelligence.

The cover of a swimming pool area by Schafbock Design. It has a unique touch. It is made of HDPE mesh. <https://sbdw.in/karnavati-swimming-pool-enclosures/>

Completion: 2014

Architect: Aakirna
